strategic insights

# What is the Rage Index?

We live in a time many commentators have called an era of outrage, negativity, and anger. To study this, Pollara created **the Rage Index** – our tracking study measuring the mood of Canadians regarding their governments, the economy, and current events.

We regularly track Canadians' sentiment on core indicators as well as news flashpoints, analyzing mood over time and within key demographic, regional, and political segments.

In addition to updating our regular tracking questions, this wave we took a closer look at the reaction to the **federal budget** and the measures in it.

# Methodology

- **Field Window:** April 22 to 26, 2024
- **Sampling:** Online survey of randomly-selected sample of **1,507 adult (18+) Canadians**
- **Reliability:** As a guideline, a probability sample of this size carries a margin of error of  $\pm 2.5\%$ , 19 times out of 20. The margin of error is larger for sub-segments.
- **Weighting:** Data has been weighted using the most current gender, age, & region Census data, to ensure the sample reflects the actual population of adult Canadians.
- **Generations:** When reporting on generations, we define Gen Z as being 18-27 years old, Millennials as being 28-43 years old, Gen X as being 44-59 years old, and Boomer+ being 60 or above (including Boomers and those older than them).

Current Rage Index:

58%

(up 5 points from January)

## Key Findings

4

- **The Rage Index hit a new high in April**, with record levels of anger about the Canadian economy, and both federal and provincial governments.
  - This wave sees a 16-point jump in the level of anger towards the BC government. This marks the first time in nearly two years of tracking that the majority of British Columbians feel negative emotions about their provincial government.
- On the **federal budget**, we find:
  - Three-in-ten (31%) Canadians say they are familiar with details of what's in the budget. Though the budget was targeted towards them, familiarity is lower among Gen Z (17%) and Millennials (24%).
  - The budget measures that elicit the strongest positive emotions are: mental health care, school food programs, free contraceptives and diabetes medication, building homes on government land, and the Canada Disability Benefit.
  - Increasing the capital gains tax is the most widely known measure of the budget. Feelings on this are mixed, though more positive when details of the policy are explained.
  - After being told about budget measures, positive sentiment towards the budget doubles from 9% to 18%, but more are still negative towards it (40%).
